

Starchaser to blast off thanks to **Attwater**

Preston based industrial laminates manufacturer Attwater has provided materials for Starchaster's latest project, set to blast off this summer.

Starchaser Industries is the UK's only private rocket research development company, building and launching rockets and running an educational outreach team encouraging children into science.

The Attwater Group is one of the few manufacturers in the UK which can make the required phenolic paper tubes required by

Starchaser for the project, and donated the materials to help it get off the ground.

James Saunders, operations manager at Attwater's subsidiary, Custom Composites, which supplied the tubes said: "This 'eco-rocket' cleanly burns recycled polythene and car tyres, so from an environmental viewpoint, it's a real winner."

Steve Bennett, CEO of Starchaser, added: "We're passionate about getting rockets and equipment into space but it's an expensive business. We're delighted that Attwater can help us out in this way."
